

Software

Hardware requirements of the software

User autonomy: Support for self-directed management of the software product

Configurability and default settings

Resource management functionality

Continuity and further development of the software product

IT organizational processes

Actually used configuration of the software product

Capacities used for installation, updates, uninstallation

Operating life of the locally used hardware products

Individual user behavior

Hardware capacities used:

Organizational structures

Proc. power

Working Memory

Local capacities

Perm. storage

Other hardware capacities

Individual user preferences

Usage patterns

Access network

Transmission capacities (bandwidth)

Edge & core network

Resources required for production and disposal of hardware

Resources required for operation of hardware (esp. energy)

Behavior & Organization

Proc. power

Working Memory

Remote capacities

Perm. storage

Other hardware capacities
